really fun game but easy campaign. I played a few levels but wasn't really having any fun. I nnever tried multiplayer, but as an indie game that likely didn't sell too many copies, I'd imagine it's dead and not something that should even be considered for the purchase. Even when they put it 90% off during every sale so it's \$1, I can't really recommend it unless you think it looks fun. You'd probably get an hour or so of fun out of it, but there are certainly better games for that price out there.. Great game, very

fun!. Yargis is a very nice game and it has a very helpful developer, it has many weapons and in game items (so there are many ways to customize your ship). The developer is going to give this game new updates also, it's an indie game and has a great campaign.. It's a fun, arcadey, shoot 'em up, with many different modes of play, such as the solo Story Missions (recommended to play these first to get a feel for the game), and plenty of multiplayer modes, with the usuals, of deathmatch, team deathmatch, ctf, base conquer, and attack/defend modes. There's also a plethora of upgrade items for your ship as you level it up, stronger and unique weapons, better engines for faster movement, utility items for tighter movement control and longer boost time, faster energy recharge, larger energy pool, force shields etc. and armor upgrades that reduce damage taken and increase your HP. As stated in other "reviews", there isn't much going on with multiplayer right now, but the game was just released a week ago. If you tell people to avoid this game, there won't be a player base for your multiplayer that you seem to want so badly. Controls in the game can seem a bit quirky, but the controls can be remapped however you want them. Better controller support is also going to happen soon, or so I was told by the dev. And just for fun, here's a video of some of my gameplay in a few of the multiplayer modes.. This game is quite boring and feels dated, but without the magic of the classics. There is a rumor that one or more of the creators is suffering from what I have heard called "reverse telescoping microbenis syndrome" and it really shows in the gameplay.. this should be in an arcade not on steam.
